 TITLE:

# ANIMATED WEBSITE FOR GYM.

As fitness has now become very common activity for everyone, I am making an animated website for a local gym where the customer gets a full overview of a gym, their price plans and range of membership as well as the review of the people.

This website has a login page where login form will be provided for sing up, where the costumer can sign up with their credentials and using validation the data will be saved and then they can login and see their profile and the overview of the gym.

The animation in the website will make it more presentable and interesting topic for the viewer to go through it.

Here the cards will be used to give detailed information of the trainers and to display the plans for membership and by choosing the plan customer can join the gym online via e payment methods.

And at the footer customer will be provided with the form where they can send their personal details and messages to us through which gym can contact them and solve their queries.

Technology required:

Laptop or computer with minimum i3 processor

OS-Windows or mac Os .

Ram- 4gb, Storage- 10gb - 128gb (minimum)

My Platform – visual studio.

Languages used – html, CSS, bootstrap.

FUTURE SCOPE: This animated website will help the customers to get a clear overview of the gym and with their products, trainers, their experience, services and their brand, which will indirectly lead to the growth of business of the gym and fitness factor.
